

Automatic noodle boiler/Square-tank noodle boiler <Cool kitchen Series>

Popular Ramen can be easily-and-deliciously cooked by latest noodle boiler which is praised even in the specialized shop.

4 and 6 hand basket type model is Cool kitchen specification.

- A double heat insulating structure can be achieved by covering the inside of main body with a heat insulator and further by providing a heat insulating layer in the surrounding area. The double heat insulating structure let the optimized air flow inside the equipment to take heat from the main body which suppresses the radiation heat from the equipment and decrease the surface temperature.
- The front surface of main body is provided with an intake port and exhaust port for making air flow which can suppress the temperature rise of the front surface and enhance the safety.
- An exhaust stack is a chimney structure which prevents exhaust gas from spreading. The exhaust gas can quickly be led to a hood while improving environment in the kitchen.

Airflow on the heat insulating layer of a back guard takes heat from the back surface of main body.
Exhaust gas can be prevented from spreading.

Air flows in the direction of arrow for taking heat out from main body.

Large-sized boiling tank for making noodle delicious with chewy texture.

Comfortably and strong chewy texture of noodle can be performed by boiling noodle with rich hot water at the high speed. Maruzen automatic noodle boiler adopts a large boiling tank. Whenever and everyone can boil delicious noodles which professionals praise.

Maruzen original hole heat pipe.

Maruzen special circulation heating method is adopted, realizing the heat efficiency of 60% and it is economical with no waste of energy while performing the excellent boiling ability.

Hot water supply device has energy-saving design by utilizing exhaust heat.

Scum and slime can be removed by overflow without lowering the temperature inside the boiling tank, so continuous cooking can be performed.

Steam shutters to enhance heat efficiency and safety.

Automatically closed when the boiling basket is not in use to prevent boiling water from splashing. Since heat is not given out, heat efficiency is enhanced and boiling time becomes shorter with energy-saving.

● Chewy and delicious noodle can be cooked because boiling water is spouted in the boiling basket intensively. (Picture is MRY-CL06)

● Steam shutters for enhancing heat efficiency through which boiling basket can be pushed.

Maruzen Original Hole Heat Pipe!

Energy is absorbed efficiently without waste by special circulation heating method.
